IBM Appoints New General Manager, Information Management

Arvind Krishna is General Manager of IBM's Information Management Software Division which includes database, data warehouse, information integration, master data management, integrated data management and associated software.

Dr. Krishna is responsible for the revenue, development, strategy, and ecosystem of the Information Management business, a multibillion dollar market. Previously, he was the Vice President of Strategy for IBM Software Group. He has held many key roles in both IBM Software and IBM Research including pioneering IBM's security software business.

He has an undergraduate degree from the Indian Institute of Technology, Kanpur and a Ph.D. from the University of Illinois at Urbana-Champaign. He is the recipient of a distinguished alumni award¹ from the University of Illinois, and is the co-author of 15 patents.

You can view his letter to the Informix community here.

Virtual Websphere Admin

We are announcing a new service offering for users of Websphere, similar to our Virtual DBA offering. We have developed a comprehensive, remote WebSphere Administration service designed specifically to meet the WebSphere administration, maintenance, management and consulting needs of our clients. You can customize your remote WebSphere Administrator service to supplement your current WebSphere administrator staff or to provide complete WebSphere administration services. You pay only for the services you need.

The service combines a sophisticated suite of monitoring and reporting tools with expert consulting services to deliver complete WebSphere performance management. Virtual-WebSphereAdmin provides proactive, remote application server support and maintenance enabling subscribers to focus their resources and improve productivity while enhancing operational benefits

Highlights:

- Substantial cost savings - with Virtual Websphere Admin you can reduce application server and systems administration costs by 40-60%
- Expert support - you'll have 24X7 access to Websphere and systems administration professionals
- High Availability - with proactive monitoring outages are minimized
- Website Support - you'll have secure client access to operating statistics, trend reports and alert status
